| This European Technical Assessment is issued in accordance with Regulation (EU) 305/2011, on the basis of | European Assessment Document 260009-00-0301 <i>Processed bottom ash from municipal solid waste incinerators as type II addition for production of concrete, mortar and grout.</i> |
| This version replaces | ETA 17/0908 of 24.05.2018 |

General comments

Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and should be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may be made, with the written consent of issuing Technical Assessment Body. Any partial reproduction has to be identified as such.

Specific parts of the European Technical Assessment

1 Technical description of the product

Pozzolanica Solena is a type II addition obtained by physical and chemical treatment of municipal solid waste incinerators bottom ashes (MIBA) deriving from municipal solid waste incinerators (waste from households as well as commercial, industrial and institutional waste which, because of its nature and composition, is similar to waste from households, excluding hazardous waste).

The treatment process is characterized by wet micronization of the mineral particles, by the high level reached of separation of metal scraps initially present in MIBA and, particularly, by the fact that the final product is metallic aluminium free and therefore does no longer induce hydrogen formation¹.

The final product (which, after wet micronization in form of slurry, undergoes a partial dehydration phase) is a humid aggregate with sand appearance and a grain size about 0 mm to 6 mm, constituted of elemental fine particles aggregated in clusters. The water present in the product should be considered as hydration water in concrete design.

The product is normally used in combination with a plasticizer and/or superplasticizer and, in particular conditions, depending on the other components of concrete, the mix design, etc., it may require an addition of a defoamer² in order to avoid the entrapment of excess of air. The granulate form may require an additional mixing time to disperse the particles.

The product is registered under REACH and its EC number is 939-997-0.

Concerning product packaging, transport, and storage, it is the responsibility of the manufacturer to undertake the appropriate measures and to advise his clients on the transport and storage, of the product as he considers necessary.

It is assumed that the product will be installed according to the manufacturer's instructions or (in absence of such instructions) according to the usual practice of the building professionals.

2 Specification of the intended use(s) in accordance with the applicable EAD

Pozzolanica Solena is intended for use as type II addition for concrete, including cast-in-situ or prefabricated structural concrete conforming to European standard EN-206. It may also be used in mortars and grouts.

Pozzolanica Solena is intended to be used in combination with Portland cement (CEM I) and Portland-composite cements (CEM II/A) with the percentages indicated in annex A. Assessed exposure classes are indicated in annex B.

3 Performance of the product and reference to the methods used for its assessment

Performances of the Pozzolanica Solena type II addition, related to the basic requirements for construction works (hereinafter BWR), were determined according to EAD 260009-00-0301 *Processed bottom ash from municipal solid waste incinerators as type II addition for production of concrete, mortar and grout*. Essential characteristics of Pozzolanica Solena are included in table 3.1.

¹ Hydrogen formation may cause problems of expansion on fresh concrete, this is a well-known phenomenon of MIBA.

² The product is normally added with a certain quantity of defoamer at the production site. However, in some concretes, depending mostly on superplasticizer and also on mix design and the other constituents (cement, aggregates, etc.), it is necessary to add additional quantities of defoamer.

| Basic Works Requirement | Essential characteristic | Performance | | |
|--|--|--------------------------|--------------------|-----------------------|
| Composition ⁽¹⁾ | SiO ₂ + Al ₂ O ₃ + Fe ₂ O ₃ | 63,59 % | | |
| | Total sulphates (SO ₃) (≤ 3 %) | 0,47 % | | |
| | Total chlorides (Cl ⁻) | 0,16 % | | |
| | Water soluble chlorides (Cl ⁻) | 0,14 % | | |
| | Total phosphates (P ₂ O ₅) (≤ 5 %) | 1,25 % | | |
| Activity index ⁽²⁾ | At 28 days (≥ 75 %) | 82,4 % | | |
| | At 90 days (≥ 85 %) | 87,1 % | | |
| Fineness | By wet sieving (≤ 12,0 % by mass) | 0,2 % | | |
| | By laser diffraction | D(v;0,5) = 14,40µm | | |
| BWR 1 | Soundness ⁽³⁾ | Reference mortar - 1,08% | | |
| | | Assessed mortar - 1,22% | | |
| Mechanical resistance and stability | Moisture content ⁽¹⁾ | 12,8% | | |
| | Loss on ignition ⁽¹⁾ | 5,2% | | |
| Particle density | | NPD ⁽⁴⁾ | | |
| Initial setting time | | Initial setting time | Final setting time | Limit of setting time |
| | | | | |
| | Reference mortar | 2 h 05 min | 3 h 30 min | -- |
| | Assessed mortar | 2 h 25 min | 3 h 35 min | ≤ 4 h 10 min |
| Compressive strength | | See annex A | | |
| Depth of penetration of water under pressure | | See annex B1 | | |
| Relative carbonation resistance | | See annex B2 | | |
| Chloride diffusion resistance | | See annex B3 | | |
| Sulphate resistance | | See annex B4 | | |

Notes:

- (1) Percentage by mass.
- (2) Percentage between the compressive resistance of the assessed mortar and the reference mortar.
- (3) Percentage of change in height of the assessed mortar and the reference mortar related to their initial values.
- (4) NPD: No Performance Determined.

Table 3.1: Performance of Pozzolanica Solena.

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

According to the Decision 1999/469/EC amended by Decision 2001/596/EC, as amended of the European Commission³, the system of AVCP (see EC delegated regulation (EU) No 568/2014 amending Annex V to Regulation (EU) 305/2011) given in the following table applies:

| Product | Intended use | System |
|--------------------|---|---------------|
| Pozzolanica Solena | Addition type II for concrete, mortar and grout | 1+ |

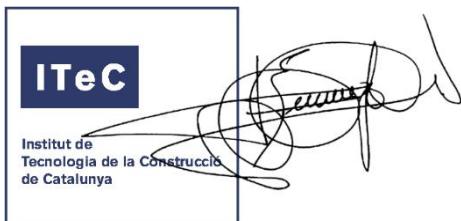

Table 4.1: Applicable AVCP System.

5 Technical details necessary for the implementation of the AVCP system, as foreseen in the applicable EAD

All the necessary technical details for the implementation of the AVCP system are laid down in the *Control Plan* deposited with the ITeC⁴, with which the factory production control shall be in accordance.

Any change in the manufacturing procedure which may affect the properties of the product shall be notified and the necessary type-testing revised according to the *Control Plan*.

Issued in Barcelona on 18 February 2020
by the Catalonia Institute of Construction Technology.

Ferran Bermejo Nualart
Technical Director, ITeC

| | 90 | 0,40 | $0,145 + \frac{0,744}{\omega_r}$ | 0,40 |
| | | 0,50 | | 0,53 |
| | | 0,60 | | 0,62 |

Notes:

(1) The water / cement ratio of the assessed mortar (ω_a) is the same water / cement ratio as the reference mortar (ω_r).

(2) Negative k values are not declared since they have no physical meaning.

Table A1: k values.

ANNEX B: EQUIVALENT DURABILITY

Test scheme for the assessment of equivalent durability:

| Cements involved in the assessment | | Exposure class |
|---|---------------------------|-----------------------|
| Reference | Assessment | |
| CEM II/A-LL 42.5R | 75 % CEM II/A-LL 42.5R | XC4 + XD3 + XS3 |
| CEM IV/A (V) 42.5R ⁽¹⁾ | + 25 % Pozzolanica Solena | XC4 + XD3 + XS3 + XA3 |

Notes:

- ⁽¹⁾ The reference and the assessment cement are not the same when assessing the exposure class XA3. CEM IV/A (V) 42.5R is needed to assess the exposure classes XC4 + XD3 + XS3 + XA3. It has not technical sense to use CEM IV/A 42.5R + 40% Pozzolanica Solena as assessment cement, because of the high percentage of Pozzolanica Solena in this cement, and also because the ETA holder does not want to add Pozzolanica Solena to the CEM IV.

Table B0: Test scheme for the assessment of equivalent durability.**ANNEX B1: DEPTH OF PENETRATION OF WATER UNDER PRESSURE**

| Concrete | Water / cement ratio | Depth of penetration (max./mean) of water under pressure (EN 12390-8) [mm] | | | | Mean value | |
